

Project update – Power supply cable installation

June 2022

Sydney Metro is Australia’s biggest public transport project.

Services started in May 2019 in the city’s north west with a train every four minutes in the peak. Metro rail will be extended into the CBD and beyond to Bankstown in 2024. There will be new CBD metro railway stations underground at Martin Place, Pitt Street, and Barangaroo and new metro platforms at Central Station. In 2024, Sydney will have 31 metro railway stations and a 66 km standalone metro railway system – the biggest urban rail project in Australian history. There will be ultimate capacity for a metro train every two minutes in each direction under the Sydney city centre.

Systems Connect (an unincorporated joint venture between CPB Contractors and UGL Limited) is delivering the Line-wide work including installing metro rail track, power systems, communications and infrastructure to turn the excavated tunnels into a working railway between Chatswood and Sydenham. Line-wide work also includes delivering the permanent systems, services and buildings required for Sydney Metro operations between Chatswood and Bankstown.

Joint bays and power supply cable installation work

The joint bays at Anzac Street and Cooks Avenue, Canterbury, and Gould Street, Campsie, will remain open until mid-June 2022. This work is ongoing because wet weather is continuing to impact our program. As already advised, the joint bay at South Parade, Campsie, will also remain open until mid-June 2022. All the joint bays may close earlier, weather conditions permitting.

Depending on the outcome of the work currently underway, further testing and commissioning may need to be undertaken to ensure safety of the electrical equipment in the joint bays. We will notify the community in advance should we need to re-excavate any joint bays in the future.

We sincerely thank you for your patience as we deliver this important work.

We are finalising the restoration work at Pat O’Conner Reserve and Hughes Park, demobilising the compound as well as completing some final demobilisation work at the Ausgrid substation.

Day work Project standard working hours are Monday to Friday 7am to 6pm, and Saturday 8am to 6pm (excluding public holidays)	
Location	Detail
Hughes Park/Pat O’Conner Reserve Roads between the Ausgrid substation in Hughes Park and Campsie Station: <ul style="list-style-type: none"> • At Anzac Street, Canterbury • On Cooks Avenue, Canterbury, at the intersection of Onslow Lane • On Gould Street, Campsie, between Evaline and Redman Streets • At South Parade, Campsie between Harold and Duke Streets 	Work activities will include: <ul style="list-style-type: none"> • Deliveries to the Hughes Park site compound. The site compound will be used predominantly during the day, with occasional night access • Park restoration and landscaping works • Establishing temporary traffic changes and contra flows, local traffic-only access, and setting up safe work areas with barriers and fencing around the sites • Cutting road pavement, excavating pits and removing spoil, pulling cables from and into pits, jointing of cables, testing of cables, backfilling the pits, and restoring the road surface. • Operation of water pump and generator

Additional information

As we work, traffic and parking measures will be put in place, as outlined below. Most work will be carried out during standard construction hours, with no work on Sundays and public holidays except for the operation of the water pump and generator if required.

The site compound at Hughes Park will predominantly be used during the day, with occasional night access

Some of this work will be noisy. Every step will be taken to minimise noise such as switching off equipment when not in use, using noise barriers wherever possible, and non-tonal reversing beepers. Where lights are required, they will be directed away from residences.

Equipment used for the work in the table below will include road saws, vacuum suction trucks, spoil trucks, excavators, mobile cranes, elevated work platforms, water carts, compactors, concrete trucks, boom pumps and pumps, drilling rigs, cable-pulling equipment, lighting towers, generators, dump trucks, large trucks and light vehicles, wood chippers, chainsaws and various powered hand tools.

Temporary changes during the work may include potential delays or changes to property access as work progresses, traffic detours in some locations, lane or footpath closures, partial road closures except to local traffic, and temporary loss of street parking. During these changes, signage and detours will be in place to direct motorists and pedestrians.
