

# Project update – Punchbowl precast walls and roof installation

## Delivering and installing the precast façade wall panels and roofing into site

November – December 2022

Systems Connect will continue to install the precast wall panels at the Punchbowl substation site at South Terrace, Punchbowl. We will also lift the roofing onto the transformers. We will be doing this work at night **between Monday 28 November and Saturday 3 December 2022 from 8pm until 6am**. Our work may not require all five days to complete.

The precast panels and the roof will be delivered on heavy vehicles and a crane will be established on the road to lift these into place. There will be a partial lane closure of South Terrace in place with traffic management in operation. Work will occur throughout the night.

**A map of our work is included over the page.**

You can expect a mobile crane, heavy vehicles, lighting towers, support trucks, and the use of hand and power tools. Some of the work may be noisy and every step will be taken to minimise noise, including switching off equipment when not in use and using non-tonal reversing beepers. Where lights are required, they will be directed away from residences.

Residents entitled to respite will be contacted separately with a letter of offer.

## We would like to talk to you

To keep up to date, please register for email updates on [LinewideMetro@transport.nsw.gov.au](mailto:LinewideMetro@transport.nsw.gov.au) or call us on **1800 171 386**. Thank you for your cooperation while we complete this essential work.

**LEGEND**

- Temporary no parking
- Substation
- Lane closure
- Traffic control
