

# Monthly update – Five Dock

September 2024

## Sydney Metro is Australia's biggest public transport project

The NSW Government is delivering Sydney Metro West – a new underground metro railway which will double rail capacity between Parramatta and the Sydney CBD, link new communities to rail services and support employment growth and housing supply.

Acciona Ferroviaria Joint Venture (AFJV) has been awarded the contract to deliver 11 kilometres of twin metro rail tunnels between The Bays and Sydney Olympic Park and excavate five new metro stations including a station at Five Dock.

## Work during September

With major excavation work completed, the main activities at the Five Dock Station sites throughout September will be the cavern lining works, including delivery and assembly of the cavern steel formwork.

Work planned for September includes:

- Construction of shaft and cavern concrete structures
- Tunnelling support activities including cross passage and central cavern construction
- Adjustments to hoarding and fencing
- Inspecting and rendering Sydney Water manholes in East Street, Waterview Street and Second Avenue
- Permanent pavement restoration works on Great North Road from Fred Kelly Place to St Alban's Church
- Oversized delivery and removal of equipment to the western construction site using both sides of Great North Road
- Delivery and removal of material and equipment (out-of-hours deliveries and removals will be notified separately)

## Work hours

Unless otherwise stated, this work will be carried out during standard construction hours:

- **Monday to Friday 7am – 6pm and Saturday 8am – 6pm**

Some work must be undertaken outside standard construction hours to minimise impacts on traffic and to ensure the safety of motorists, pedestrians and workers. Separate notifications will continue to be provided for this work.

Tunnelling, cross passage and cavern excavation are **approved for 24-hour operation**. This includes tunnelling support activities inside the eastern acoustic shed as well as tunnelling support activities inside the excavated underground cavern and the excavated shaft on the western site (under strict noise criteria). No work is planned on the surface of the western site after 6pm unless otherwise notified.

## Equipment used

Equipment used for this work includes but is not limited to: trucks, light vehicles, concrete trucks, concrete pumps, road profilers, asphalt pavers, vibratory rollers, bobcat, compaction plate, road concrete saws, jackhammers, elevated

work platforms, excavators, street sweepers, vacuum trucks, cranes, light towers, line marking machine, generators and power tools.

### Changes to traffic, pedestrian and cyclist routes

During the work, traffic control will be in place to assist motorists, pedestrians, and cyclists with any changes to traffic conditions. This may include contraflow lanes, stop-slow traffic controls to assist with truck movements, oversized deliveries and temporary lane or footpath closures.
