

Monthly update – Pyrmont

May 2025

John Holland CPB Contractors Ghella Joint Venture (JCG) has been awarded the contract to deliver 3.5 kilometres of twin metro rail tunnels between The Bays and Hunter Street and excavate the Pyrmont and Hunter Street metro stations.

In May, shaft excavation at Pyrmont East and West will continue. At Pyrmont West, we will also start roadheader excavation of the service adits from inside the shaft, travelling underneath Paternoster Row toward the main cavern.

Excavation of the crossover cavern will also continue as well as benching.

What work are we doing?

Throughout May, work will include:

- Underground cavern and adit excavation including heading and benching, installing ground support (bolting) and concreting
- 24 hour tunnelling support activities such as spoil removal, use of sweeper trucks and use of ventilation
- Pyrmont East and West shaft excavation including hammering, installing ground support and spoil removal
- 24 hour deliveries to Pyrmont East and West sites
- Out of hours work inside the acoustic sheds
- Temporary road and lane closures for site deliveries, concrete pours and line marking
- Hoarding adjustments
- Groundwater and building monitoring.

When and where we'll be working

Shaft excavation at our East and West sites will take place during standard working hours, 7am – 6pm Monday to Friday and 8am – 6pm, Saturdays.

Out-of-hours work and deliveries to East and West sites will be 24 hours, seven days a week.

Tunnelling and support activities including spoil removal and deliveries will be 24 hours, seven days a week. Sweeper trucks will be in rotation if required during this time.

Updates to the construction program are provided in our weekly Pyrmont email updates. You can subscribe to these updates by emailing: MetroTunnelsJCGJV@transport.nsw.gov.au

What will this mean for you?

During construction, you may notice:

- Periods of increased noise including groundborne and vibration
- Presence of dust and water mist
- Use of machinery and equipment including gantry cranes, water treatment facility and support activities
- Worksite lighting
- Increased truck and construction vehicle movements via Edward Street, Pyrmont Bridge Road, Pyrmont Street and Union Street both during the day and at night
- Temporary footpath, lane and road closures and detours
- Presence of construction workers and vehicles, traffic controllers and traffic management.

Managing our impacts

Construction activities may generate increased noise and vibration and will be mitigated on site, where possible.

We aim to reduce impacts on the community and the environment by:

- Using acoustic sheds and acoustic coverings
- Using onsite dust suppression such as roller doors, misters, cannons and hoses within the acoustic shed

- Directing lighting away from properties
- Scheduling high impact work during standard construction hours.

Equipment and machinery used

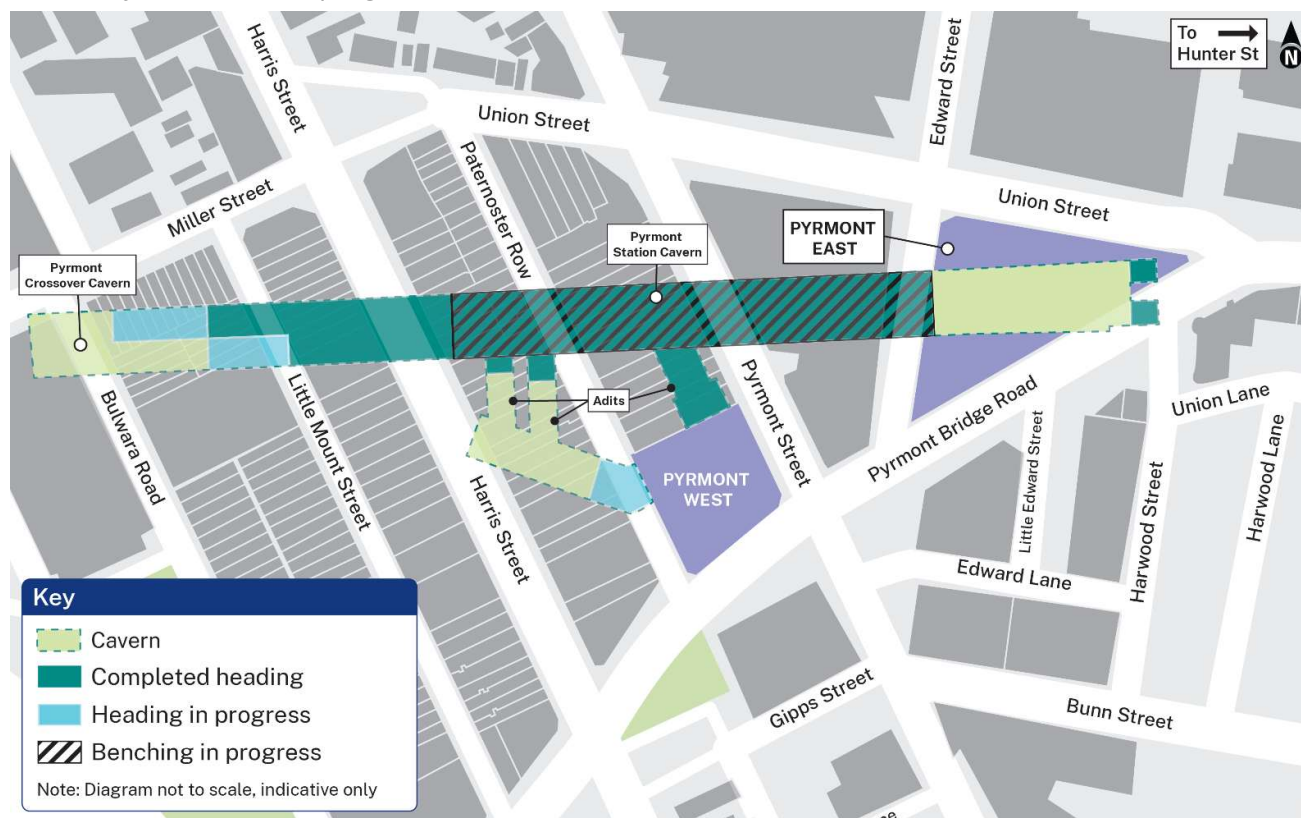

May include but is not limited to mobile cranes, roadheaders, rock bolters, ventilation fans, vacuum trucks, sweeper trucks, excavators and hammer attachments, vibratory rollers, drill rigs, jackhammers, rattle guns and hand tools, shotcrete rigs, construction vehicles, concrete trucks, elevated work platforms, lighting towers, traffic control equipment and generators.

Above ground out of hours work

Below is a schedule of out of hours work over the next three months.
