

Service tunnels and junction caverns update

24 June 2025

Sydney Metro is Australia's biggest public transport project.

The NSW Government is delivering Sydney Metro West – a new underground metro railway which will double rail capacity between Parramatta and the Sydney CBD, link new communities to rail services and support employment growth and housing supply.

Gamuda Australia and Laing O'Rourke Consortium (GLC) has been awarded the contract to deliver nine kilometres of twin metro rail tunnels between Westmead and Sydney Olympic Park, excavation for two new metro stations, a stabling and maintenance facility at Clyde and a precast facility at Eastern Creek.

Monthly update – July 2025

Phase 3 construction involving the lining, utility installation and fit out of the two underground service tunnels and junction caverns is continuing and is expected to be completed by late 2025, see map overleaf.

Machinery and equipment will enter the temporary access shaft at Clyde.

Tunnelling activities will be carried out 24 hours a day, seven days a week.

What to expect

Residents near the tunnel alignment may experience temporary ground-borne noise and vibration as lining of the two underground service tunnels and junction caverns continues through the area. The levels of noise and vibration are expected to be low and will vary depending on the ground conditions, depth of the tunnel, time of day, background noise levels, and type of building. The duration of these impacts will depend on the location of your property along the tunnel alignment.

To view your property in relation to the tunnel alignment, visit Sydney Metro's interactive map portal at: www.caportal.com.au/tfnsw/sydmetrowest/map

Noise and vibration levels will be regularly monitored during construction and managed in accordance with approvals and environmental requirements.
