

Healthy and safety initiatives

2019–20 Plan

Leadership

Leaders influence and develop the safety culture and subsequently determine the organisation's health and safety outcomes. A comprehensive leadership program will be implemented focusing on leaders' health and safety obligations, behaviours and applied knowledge.

Critical safety risks

Sydney Metro will improve current industry standards and work with the supply chain to identify and implement higher order controls to eliminate and reduce incidents associated with the following risks:

- working at heights
- people and plant
- rail safety.

Wellbeing

The wellbeing of our people is key to our growth and achievement, we want everyone to feel good, function well and lead a healthy lifestyle. To encourage and support these aspects we will develop an evidence-based wellbeing program.

Silica dust

Silicosis continues to be a major health and safety issue across the infrastructure sector. We will continue to tackle this through eliminating or controlling exposures to respirable crystalline silica.

Heavy vehicle safety

Heavy vehicle safety remains a serious issue in the Sydney Metropolitan Area of NSW. We will address the risks of our project's transport activities by applying a Safe System approach to Road Safety.
